Serious adverse reactions are rare. Common reactions to vaccines are generally mild and temporary, such as localised pain, redness and swelling at the injection site and low grade fever.

### **Facts - Vaccination Matters**

Mushroom poisoning refers to harmful effects from ingestion of toxic substances present in a mushroom. These symptoms can vary from slight gastrointestinal discomfort to death. The toxins present are secondary metabolites produced by the fungus. Mushroom poisoning is usually the result of ingestion of wild mushrooms after misidentification of a toxic mushroom as an edible species.
