**Big Bang Simon Singh**

The Big Bang theory is the prevailing cosmological model for the observable universe from the earliest known periods through its subsequent large-scale evolution. The model describes how the universe expanded from a very high-density and high-temperature state, and offers a comprehensive explanation for a broad range of phenomena, including the abundance of light elements, the cosmic microwave ...

La expresión big bang proviene del astrofísico inglés Fred Hoyle, uno de los detractores de esta teoría y, a su vez, uno de los principales defensores de la teoría del estado estacionario, quien dijo, para explicar mejor el fenómeno, que el modelo descrito era simplemente un big bang (gran explosión). [15] En el inicio del universo ni hubo explosión ni fue grande, pues en rigor surgió ...

Il Big Bang (pron. inglese /big'bæŋg/, in Italiano "Grande Scoppio") è un modello cosmologico basato sull'idea che l'universo iniziò a espandersi a velocità elevatissima in un tempo finito nel passato a partire da una condizione di curvatura, temperatura e densità estreme e che questo processo continui tuttora.. È il modello predominante nella comunità scientifica sulla base di prove ...

The Big Bang — that faster-than-light expansion that marked the beginning of the universe — seems like it would be a hard thing to prove. It would have happened a long, long time ago somewhere far, far away. We don't have time machines or intergalactic spacecraft, so it'd be understandable to assume that the Big Bang is just a theory we'll never prove.

Big Bang-teorin utgår från den kosmologiska principen att universum är homogent och isotropt, det vill säga att oberoende av var man är i universum och åt vilket håll man tittar så ser det likadant ut. Denna princip leder till att rumtidsgeometrin för universum ges av Friedmann-Lemaître-Robertson-Walkermetriken:  $= - + [- + (+ )]$  där  $a(t)$  är en skalfaktor och  $k$  beskriver ...
