Comparative Anatomy And Histology Of

Histology of Ganglia. A ganglion (pl. ganglia) is a mass of nerve cell bodies found outside of the central nervous system (CNS) along with some glial cells and connective tissue. Ganglia have both afferent and efferent nerve fibers. As they exist outside of the CNS, they are sometimes referred to as peripheral ganglia. In this article we will discuss the histology of the ganglia and ...

A striated duct (Pflüger's ducts) is a gland duct which connects an intercalated duct to an interlobular duct. It is characterized by the basal infoldings of its plasma membrane, characteristic of ion-pumping activity by the numerous mitochondria. Along with the intercalated ducts, they function to modify salivary fluid by secreting HCO_3^- and K^+ and reabsorbing Na^+ and Cl^- using the ...

Striated duct - Wikipedia

Plant anatomy or phytotomy is the general term for the study of the internal structure of plants. Originally it included plant morphology, the description of the physical form and external structure of plants, but since the mid-20th century plant anatomy has been considered a separate field referring only to internal plant structure. Plant anatomy is now frequently investigated at the cellular ...

White blood cells (abbreviated WBCs, also called leukocytes from leuko = white + cyte = cell) comprise several distinct cell types, neutrophils, eosinophils, basophils, lymphocytes and monocytes. Certain developmental and morphological similarities permit the first three these cells to be usefully grouped together as granulocytes or polymorphonuclear leukocytes.
