Graph Drawing Symposium On Graph

Graph drawing is an area of mathematics and computer science combining methods from geometric graph theory and information visualization to derive two-dimensional depictions of graphs arising from applications such as social network analysis, cartography, linguistics, and bioinformatics.. A drawing of a graph or network diagram is a pictorial representation of the vertices and edges of a graph.

Force-directed graph drawing algorithms are a class of algorithms for drawing graphs in an aesthetically-pleasing way. Their purpose is to position the nodes of a graph in two-dimensional or three-dimensional space so that all the edges are of more or less equal length and there are as few crossing edges as possible, by assigning forces among the set of edges and the set of nodes, based on ...

What is GraphML? GraphML is a comprehensive and easy-to-use file format for graphs. It consists of a language core to describe the structural properties of a graph and a flexible extension mechanism to add application-specific data.

Graph Crossing Number. Given a "good" graph (i.e., one for which all intersecting graph edges intersect in a single point and arise from four distinct graph vertices), the crossing number is the minimum possible number of crossings with which the graph can be drawn, including using curved (non-rectilinear) edges. Several notational conventions exist in the literature, with some of the more ...

A 2010 paper with Martin Demaine, Andrea Hawksley, Hiro Ito, Po-Ru Loh, Shelly Manber, and Omari Stephens considers what happens when we restrict the folds to a sequence of simple folds, folding along a single line at a time. Check out our new font based on simple fold and cut!. Ivars Peterson briefly describes the fold-and-cut results in his article, "Fold-and-Cut Magic", which appears in ...

1. Introduction. With the boosting of data, there is a dire demand on presenting and analyzing the data (Wang et al., 2016), eliciting the rapid construction tools of data visualization. While there have been a dozen of authoring systems and programming toolkits for visual design and development
