In physics, physical optics, or wave optics, is the branch of optics that studies interference, diffraction, polarization, and other phenomena for which the ray approximation of geometric optics is not valid. This usage tends not to include effects such as quantum noise in optical communication, which is studied in the sub-branch of coherence theory

Gravity (from Latin gravitas, meaning 'weight'), or gravitation, is a natural phenomenon by which all things with mass or energy—including planets, stars, galaxies, and even light—are brought toward (or gravitate toward) one another. On Earth, gravity gives weight to physical objects, and the Moon's gravity causes the ocean tides. The gravitational attraction of the original gaseous matter ...

Horsepower (hp) measures the amount of mechanical energy a device uses to complete a task. An air compressor converts electrical energy into mechanical energy to move air or liquid particles. Typically electrical power is measured in watts which equals a single joule of energy consumed every second.

Forces applied across, and parallel to, the surface of an object result in a shearing stress. A shearing stress, or force per unit area, deforms the object along the direction of the applied force. For example, pressing on a block of foam along its surface.

Dalga (veya eski ifadesiyle mevce), bir fizik terimi olarak uzayda ve maddede yayılan ve enerjinin taşınmasına yol açan titreşime denir. Dalga hareketi, orta parçaların yer değişimi sıklıkla olmadan, yani çok az ya da hiç kütle taşınımı olmadan, enerjiji bir yerden başka bir yere taşır. Dalgalar sabit

Le voyage dans le temps est un des grands thèmes de la science-fiction, au point d'être considéré comme un genre à part entière. L'idée d'aller revivre le passé ou de découvrir à l'avance le futur est un rêve humain causé par le fait que l'être humain avance dans le temps de manière permanente, mais irréversible (et, à l'état de veille, apparemment de façon linéaire).
