The Chemistry Of Nonbenzenoid Aromatic

It is our great pleasure to welcome you to the 18th International Symposium on Novel Aromatic Compounds (ISNA-18) which is held in Sapporo on the northernmost island of Japan on July 21st (Sun) - 26th (Fri), 2019.

The 18th International Symposium on Novel Aromatic ...

Hydrocarbon, any of a class of organic chemical compounds composed only of the elements carbon (C) and hydrogen (H). The carbon atoms join together to form the framework of the compound, and the hydrogen atoms attach to them in many different configurations. Hydrocarbons are the principal constituents of petroleum and natural gas. They serve as fuels and lubricants as well as raw materials for ...

Etymology. The name derives from the Ancient Greek word πολύς (polus, meaning "many, much") and the word phenol which refers to a chemical structure formed by attaching to an aromatic benzenoid ring, a hydroxyl (-OH) group akin to that found in alcohols (hence the -ol suffix). The term polyphenol appears to have been in use since 1894. Definition of the term polyphenol

Hydrocarbon - Physical properties: The physical properties of alkenes and alkynes are generally similar to those of alkanes or cycloalkanes with equal numbers of carbon atoms. Alkynes have higher boiling points than alkanes or alkenes, because the electric field of an alkyne, with its increased number of weakly held π electrons, is more easily distorted, producing stronger attractive forces ...
